### **Subject 3. Prop Making and Set Decoration**

#### **1. What is a common base for fake stone?**

- a) Foam
- b) Plaster
- c) Wood
- d) Cardboard

**Correct Answer: b) Plaster**

**Explanation:** Plaster is frequently used as a base for creating realistic fake stone. Its malleability allows for easy shaping and detailing, which can be further enhanced with paints and textures to mimic the appearance of natural stone. Additionally, it is durable and can withstand the rigors of stage production.

#### **2. How can you age wood props effectively?**

- a) Staining
- b) Painting
- c) Sanding
- d) Distressing

**Correct Answer: d) Distressing**

**Explanation:** Distressing is a popular technique used to age wood props, making them look weathered and authentic. This can be achieved through methods such as scraping, denting, or using chemical treatments. The goal is to replicate the natural wear and tear that occurs over time, adding to the visual storytelling of the set.

#### **3. What material mimics glass in props?**

- a) Wood
- b) Cardboard
- c) Styrofoam
- d) Plexiglass

**Correct Answer: d) Plexiglass**

**Explanation:** Plexiglass is a clear acrylic material often used to simulate glass in stage props. It is lightweight, shatter-resistant, and can be easily cut and shaped, making it an ideal choice for creating realistic glass effects. Its clarity can also be enhanced with additional coatings for more realism.

**4. What technique enhances the realism of stone props?**

- a) Gluing
- b) Cutting
- c) Texturing
- d) Painting

**Correct Answer: c) Texturing**

**Explanation:** Texturing enhances the realism of stone props by adding depth and dimension to the surface. Techniques such as carving, stamping, or using molds can create realistic stone patterns. This, combined with appropriate color washes, can help achieve a convincing stone appearance that captures light effectively.

**5. Which paint type is best for distressed effects?**

- a) Spray
- b) Enamel
- c) Gloss
- d) Matte

**Correct Answer: d) Matte**

**Explanation:** Matte paint is the best choice for achieving distressed effects on props. Its non-reflective finish helps to create a natural look by allowing the underlying textures to show through. This is particularly effective when layering different colors to simulate age and wear, enhancing the authenticity of the piece.

**6. What is the best method to create fake wood grain?**

- a) Spraying
- b) Pouring
- c) Stippling
- d) Brushing

**Correct Answer: c) Stippling**

**Explanation:** Stippling is a technique used to create realistic wood grain patterns on props. By using a stippling brush or sponge, artists can apply paint in a way that mimics the natural texture of wood fibers. This method allows for great control over detail, making the prop look more authentic in a stage setting.

**7. Which material simulates stone weight effectively?**

- a) Foam
- b) Cardboard
- c) MDF
- d) Plywood

**Correct Answer: c) MDF**

**Explanation:** Medium-Density Fiberboard (MDF) simulates stone weight effectively due to its density and durability. While it is heavier than foam and cardboard, it can be shaped and painted to resemble stone, providing a solid structure for props. Its smooth surface allows for fine detailing, contributing to the overall authenticity.

**8. How do you create weathered metal effects?**

- a) Polishing
- b) Rubbing
- c) Spraying
- d) Dry brushing

**Correct Answer: d) Dry brushing**

**Explanation:** Dry brushing is an effective technique for creating weathered metal effects on props. By using a dry brush with minimal paint, you can highlight raised areas, giving the appearance of wear and rust. This method allows for subtle color variations that enhance the realism of metal surfaces in set design.

**9. What is a common method for aging glass props?**

- a) Painting
- b) Cutting
- c) Polishing
- d) Sandblasting

**Correct Answer: d) Sandblasting**

**Explanation:** Sandblasting is commonly used to age glass props by creating a frosted effect on the surface. This technique not only reduces the clarity of the glass, making it appear older but also adds texture that mimics natural wear over time. It is ideal for achieving a vintage or distressed look.

**10. Which tool is essential for creating precise prop details?**

- a) Screwdriver
- b) Saw
- c) Hammer
- d) Chisel

**Correct Answer: d) Chisel**

**Explanation:** A chisel is essential for creating precise details on props, especially when working with wood or soft materials like foam. It allows for intricate carving and shaping, enabling craftsmen to add fine textures and features that enhance the realism of the prop, making it suitable for stage use.

**11. What is the ideal primer for prop painting?**

- a) Oil-based
- b) Enamel
- c) Water-based
- d) Acrylic

**Correct Answer: c) Water-based**

**Explanation:** Water-based primer is ideal for prop painting as it dries quickly and is easy to clean up. It provides a good base for paint adhesion, reducing the risk of peeling or chipping. Furthermore, it is less toxic than oil-based primers, making it safer for indoor use in scenic construction.

**12. Which texture adds realism to fake brick?**

- a) Smooth
- b) Rough
- c) Glossy
- d) Bumpy

**Correct Answer: b) Rough**

**Explanation:** A rough texture adds realism to fake brick by mimicking the natural imperfections found in real bricks. This can be achieved through various means such as applying joint compound, using textured paints, or adding sand to the surface. The roughness captures light and shadow, enhancing the visual authenticity.

**13. What is the best way to simulate cracks in props?**

- a) Gluing
- b) Sculpting
- c) Scribing
- d) Painting

**Correct Answer: c) Scribing**

**Explanation:** Scribing is the best way to simulate cracks in props, as it involves carving or scoring the surface to create the illusion of fissures. This technique allows for precise control over the crack patterns, making them look more realistic. It can be used on various materials, including foam and wood.

**14. Which material is lightweight for prop construction?**

- a) Foam
- b) Glass
- c) Wood
- d) Metals

**Correct Answer: a) Foam**

**Explanation:** Foam is a lightweight material commonly used for prop construction. Its versatility allows for a range of effects, from realistic stone to whimsical shapes.

**15. What is the role of a sealant in prop making?**

- a) Protecting surfaces
- b) Enhancing color
- c) Creating texture
- d) Adding weight

**Correct Answer: a) Protecting surfaces**

**Explanation:** The primary role of a sealant in prop making is to protect surfaces from damage and wear. Sealants create a barrier against moisture, dirt, and physical impact, preserving the appearance and integrity of the prop over time. This is especially important for props that will be handled frequently during performances.

**16. Which paint technique creates shadow effects?**

- a) Stenciling
- b) Washing
- c) Glazing
- d) Spraying

**Correct Answer: c) Glazing**

**Explanation:** Glazing is a paint technique that creates shadow effects by applying a thin, transparent layer of color over a base coat. This method allows light to interact with the underlying colors, enhancing depth and dimension. It is particularly useful for creating realistic finishes on props, simulating the effects of light and shadow.

**17. What is a common use for burlap in props?**

- a) Support
- b) Color
- c) Structure
- d) Texture

**Correct Answer: d) Texture**

**Explanation:** Burlap is commonly used in props for adding texture and a rustic appearance. Its coarse weave creates visual interest and can be used to simulate various materials, such as natural fabrics. When combined with paint or other aging techniques, burlap can enhance the authenticity of a prop or set piece.

**18. Which adhesive is best for foam props?**

- a) Hot glue
- b) Contact cement
- c) Wood glue
- d) Super glue

**Correct Answer: b) Contact cement**

**Explanation:** Contact cement is the best adhesive for foam props because it forms a strong bond without damaging the material. It allows for repositioning before setting, which is crucial for precise alignment in prop construction. This adhesive is also flexible, maintaining the integrity of the foam during handling and transport.

**19. What is a key characteristic of realistic stone paint?**

- a) Bright
- b) Textured
- c) Transparent
- d) Glossy

**Correct Answer: b) Textured**

**Explanation:** A key characteristic of realistic stone paint is its textured finish, which mimics the natural irregularities found in stone surfaces. This texture can be achieved through additives or specific application techniques. Textured paint enhances the visual depth of props, making them appear more authentic and lifelike on stage.

**20. Which method enhances the appearance of aged wood?**

- a) Varnishing
- b) Staining
- c) Painting
- d) Sealing

**Correct Answer: b) Staining**

**Explanation:** Staining enhances the appearance of aged wood by penetrating the surface and adding color while allowing the natural grain to show through. This technique can darken the wood, mimicking the effects of aging and exposure to the elements. It is often used in combination with other distressing techniques for added realism.

**21. What is an effective way to create faux marble?**

- a) Pouring
- b) Layering
- c) Brushing
- d) Spraying

**Correct Answer: b) Layering**

**Explanation:** Layering is an effective technique for creating faux marble. By applying multiple thin layers of paint in varying shades, artists can mimic the intricate veining and depth of real marble. This method allows for creative control over the final appearance, enabling the creation of unique and realistic marble finishes.

**22. Which tool is essential for cutting foam?**

- a) Hacksaw
- b) Jigsaw
- c) Utility knife
- d) Band saw

**Correct Answer: c) Utility knife**

**Explanation:** A utility knife is essential for cutting foam as it provides precision and control for detailed shapes. Its sharp blade can easily slice through foam without tearing, allowing for clean edges and smooth finishes. This is crucial for creating professional-quality props that meet the demands of scenic construction.

**23. How can you simulate rust on metal props?**

- a) Powder
- b) Dry brushing
- c) Spray paint
- d) Staining

**Correct Answer: b) Dry brushing**

**Explanation:** Dry brushing is an effective method to simulate rust on metal props. By applying a lighter, reddish-brown paint over a darker base, artists can create a layered effect that resembles actual rust. This technique enhances the realism of the prop, contributing to the overall narrative and aesthetic of the set.

**24. What is a common use for chicken wire in props?**

- a) Painting
- b) Support structure
- c) Weight
- d) Decoration

**Correct Answer: b) Support structure**

**Explanation:** Chicken wire is commonly used as a support structure in props due to its lightweight and flexible nature. It can be shaped to create the underlying form of larger props, allowing for more complex designs without compromising stability. This versatility makes it a valuable material in scenic construction.

**25. How do you create depth in faux stone finishes?**

- a) Spraying
- b) Layering
- c) Cutting
- d) Shading

**Correct Answer: d) Shading**
